Spring 2023

Lecture 1: Database and DBMS

Instructor: Alex Dekhtyar Ishaan Sathaye

# Introduction

Definition of a database and DBMS in Professor Notes.

Spring 2023

## Lecture 2: Relational Data Model

Instructor: Alex Dekhtyar

Ishaan Sathaye

### Relational Data Model

**Definition 1** Relational data model is an approach to organizing collections of data

- Relation
  - Relational Table  $\longrightarrow$  Name + Schema
    - \* Schema: List of attribute name + attribute type pairs
- ullet Relational Database  $\longrightarrow$  Collection of Relations tables
- Table Instance: set of records with instantiated values of the attributes
  - Finite
  - Records, rows, tuples

One unit of data is called a datum.

Object, entity, event: description of one object, entity, event

- Records consist of attributes or fields (rows in the table).
- Attributes is a named container for a value of a specific type.

#### **Database Table Constraint**

**Definition 2** Limitations of table instances

- Candidate Key: set or lists of attributes that uniquely define a record in a table, minimal such set of attributes, made up of multiple attributes sometimes.
  - Every attribute is necessary.

# Examples

#### CSC 365 Example

Course Object:

 $\bullet$  Prefix: CSC  $\longrightarrow$  **String** 

• Course #:  $365 \longrightarrow Integer$ 

 $\bullet$  Name: Introduction to Database Systems  $\longrightarrow$  String

• Description: Basic Principles, ...  $\longrightarrow$  **String** 

• Units:  $4 \longrightarrow \mathbf{Integer}$ 

### Department Object:

• Name: Computer Science and Software Engineering

• Abbreviation: CSSE

• Building: 14

• Room: 245

• College: CENG

Stringing these objects together based on relationship would make a **network model**.

## Schema Example

Course(Prefix String, Course# Integer, Name String, Description String, Units Integer)

Prefix	Course#	Name	Description	Units
CSC	365	Introduction to Database Systems	Basic Principles,	4
CSC	357	Systems Programming		4

Department (Name, College, Building, Room): Department would also have a table as well.

 $\mathbf{Spring}\ \mathbf{2023}$ 

Lecture 3: RDM Cont.

Instructor: Alex Dekhtyar Ishaan Sathaye

# Relational Data Model

What makes a record unique?

• Superkey: any set of attributes that uniquely defines a record in a table

• Primary Key: candidate key chosen by you

Spring 2023

Lecture 4: SQL DDL and DML

Instructor: Alex Dekhtyar Ishaan Sathaye

# MySQL Access

- 1. Server Address = host: mysql.labthreesixfive.com
- 2. Port: 3306
- 3. username
- 4. password

#### MySQL Database

- Namespace
- Collection of Tables
- Set of Permissions

# Case Sensitivity

#### Case Sensitive

- Table Names
- Database Names

#### Not Case Sensitive

- Attribute Names
- SQL Keywords

# Types

- Numeric Types
  - Integer Types
    - \* TINYINT
    - \* SMALLINT
    - \* MEDIUMINT

- \* INT
- \* BIGINT
- Floating Point Types
  - \* FLOAT
  - \* DOUBLE(P, D)
  - \* **DECIMAL**
- String Types
  - Character Types
    - \* CHAR(N)  $\longrightarrow$  Fixed Length
    - \* VARCHAR(N)  $\longrightarrow$  Variable Length
    - \* TINYTEXT
    - \*  $\mathbf{TEXT} \longrightarrow$  for storing large amounts of text
    - \* MEDIUMTEXT
    - \* LONGTEXT
- Date and Time Types
  - Date Types
    - \* DATE
    - \* DATETIME
    - \* TIMESTAMP
    - \* TIME
    - \* YEAR

# Data Definition Language (DDL)

Commands from DDL act upon the schema

- CREATE TABLE
- DROP TABLE
- ALTER TABLE

### Define a Relational Table

Aspects needed to define a table:

- Table Name
- Attributes: Name + Type
- Constraints

# Data Manipulation Language (DML)

Commands from DML act upon the instance.

- INSERT
- DELETE
- UPDATE

## **Inserting Data**

```
INSERT INTO <table_name>(<attribute_name>, ...)
   VALUES (<value>, ...);
```

Supply values in order of attribute declarations in CREATE TABLE statement. Can omit the attribute names if values supplied are in the same order. If need to omit a value then omit that attribute name as well.

### More on Constraints

- [NOT] NULL attribute cannot be null
- UNIQUE
- PRIMARY KEY
- FOREIGN KEY
- **DEFAULT** <**exp**> default value for attribute
- AUTO\_INCREMENT means that the attribute is an integer and is automatically incremented

### Lab 2

MySQL Server

• LabThreeSixFive.com

- mysql command line client
- IDE (DatGrip)
- mysql connectivity from Python

Lab 2 uses Create Table, Drop Table, and Insert.

## Code from Lab

```
show tables
CREATE TABLE Departments (
    DeptId INT PRIMARY KEY,
    Abbr VARCHAR(20) UNIQUE, -- UNIQUE makes candidate key
    Name VARCHAR(128) UNIQUE,
    College CHAR(10),
    Building INT,
    Room CHAR(6),
    \operatorname{\mathsf{--}} set multiple candidate keys at the bottom
    UNIQUE(Building, Room),
    -- foreign key always a separate line statement:
    -- FOREIGN KEY(College) REFERENCES colleges(abbr)
);
describe colleges;
SELECT * FROM colleges;
show CREATE TABLE colleges;
show CREATE TABLE Departments;
INSERT INTO Departments
    VALUES(1, 'CSSE', 'Computer Science and Software Engineering', 'CENG', 14, '245');
INSERT INTO Departments(DeptId, Abbr, Name, College, Building, Room)
    VALUES(1, 'CSSE', 'Computer Science and Software Engineering', 'CENG', 14, '245');
```

Spring 2023

## Lecture 5: DDL and DML Continued

Instructor: Alex Dekhtyar

 $Is haan\ Sathaye$ 

### DML

## **Updating Data**

```
UPDATE <table_name>
    SET <attribute_name> = <value>
    WHERE <condition>;
```

#### Example

```
UPDATE colleges
   SET abbr = 'COSAM'
WHERE abbr = 'COASM'
```

WHERE clause is a filter that determines which rows are updated.

### **Deleting Data**

```
DELETE FROM <table_name>
    WHERE <condition>;
```

### DDL

### Altering Tables

#### Commands

- ADD add a column/attribute/key
- DROP
- MODIFY
- RENAME

### Parameters

- $\bullet$  COLUMN
- CONSTRAINT
- FOREIGN KEY
- PRIMARY KEY
- UNIQUE

Adding an attribute, dropping/adding a constraint, renaming a table, disable/enabling keys, and modifying attributes examples are in this professor notes: 4-SQLDDLDML.pdf

 $\mathbf{Spring}\ \mathbf{2023}$ 

Lecture 5: DDL and DML Continued
